DECLARATION

Hereby we declare that SIT accreditation attests the competence of a Laboratory for carrying out calibrations of measuring instruments and standards traceable to national and international Standards of the SI-International System of units. Such attestation is recognized, at national level by decrees relative to the law 273/91, and as well as at international level by agreements whose SIT is signatory (EA-MLA e ILAC-MRA).

All the users can start themselves a traceability chain that fulfils the requirements of the international Standards (ISO 9001, ISO 10012) from the standards calibrated by the laboratories accredited by SIT and provided with the calibration certificates.

The display of the calibration certificates relevant to reference standards – called “first line standards” – by the Laboratory for demonstrating its capacity to carry out traceable calibrations is actually useless; in fact SIT carried out in compliance with ISO 58 and ISO 17011, the verification regarding to the Laboratory competence, operation, standards, premises, personnel and as well as its own quality system.

The customers and the eventual assessors are just required to check the congruence of the object to be calibrated with the scope of the accreditation described in the tables enclosed to the valid certificate of accreditation and available in the SIT Web-site www.sit-italia.it.

Head of SIT Central Secretariat
